

This document was developed as part of the conduct of a Remedial Investigation/Feasibility Study in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the National Contingency Plan to investigate the nature and extent of contamination in sediments in the Six Mile Passaic River Study Area, NJ, including historical and on-going sources. These documents have been developed in cooperation with, and were approved under, CERCLA by U.S. EPA Region 2. The reader is cautioned to carefully consider the specialized goals and objectives of these investigations, and to review all related documents.

This document was developed as part of the conduct of a Remedial Investigation/Feasibility Study in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and the National Contingency Plan to investigate the nature and extent of contamination in sediments in the Six Mile Passaic River Study Area, NJ, including historical and on-going sources. These documents have been developed in cooperation with, and were approved under, CERCLA by U.S. EPA Region 2. The reader is cautioned to carefully consider the specialized goals and objectives of these investigations, and to review all related documents.

## TABLE B-1

### INVENTORY OF BATHYMETRIC SURVEYS Passaic River Study Area, New Jersey

#### Foot Notes :

- (1) Date from USACE soundings surveys. If no Month is listed none was available or was unreadable
- (2) File & Page No. taken directly from sheets.
- (3) Notes on Map Type: S = Soundings, BM = Base Map, RM = Range Map
- (4) All Available surveys were categorized into 1 of 3 areas: A = surveys within the seven mile study area reach that passed evaluation.  
B = surveys within the Hackensack River (up to Pulaski Skyway Br) and Upper Newark Bay (CRR of NJ to Newark Bay Bridge).  
C = surveys that are out of the seven mile study area and the surveys within the seven mile reach that did not pass the evaluation.
- (5) See attached location map for reach location.
- (6) Each sheet was evaluated for the following criteria:
  - soundings survey
  - within the seven mile study reach
  - verifiable vertical datum plane
  - adequate density of soundings
  - suitable scale for digitization
  - readability
